IRSST Analytical Method 244 applicable asbestos concentration ranges are as follows: ND (none detected) , Trace (4 or less fibers, possible contamination), <1%, 1 to 5%, from 5 to 10%, from 10 to 25%, from 25-50%, from 50 to 75%, from 75% to 90%, >90%. Floor tiles reported as ND or Trace by PLM are required to be analyzed by TEM (method ELAP 198.4). The estimated limit of detection for non-detect samples is <0.1%. Due to limitations inherent in PLM, asbestos fibers with dimensions below the limit of resolution will not be detected. The above test report relates only to the items tested and may not be reproduced in any form without the express written approval of EMSL. EMSL's liability is limited to the cost of analysis. EMSL bears no responsibility for sample collection

Samples analyzed by EMSL Canada Inc. Ville Saint-Laurent, QC PLM IRSST: NVLAP Lab Code 201052-0, TEM IRSST: NYS ELAP Lab Code 12043
